Directions

▶ To sample the wheat field, use a "zig zag" or "W" pattern and walk at least 15 steps (about 30 ft) between stops.
▶ Carefully pull and examine 3 tillers (stems) per stop, taking one tiller from the left, right, and front.
▶ At each stop, color in the leaf for each tiller that has one or more greenbugs on it, and keep a running total. If the number of infested tillers is less than or equal to the number in the "Don't Treat" column then stop sampling, and do not treat. If the number of infested tillers is equal to or greater than the number in the "Treat" column then stop sampling, and treat the field. If the number falls within the numbers listed in the "Keep Sampling" column, continue sampling until a decision can be made, or the "Stop Sampling" box has been reached.

▶ If the "Stop Sampling" box is reached and a decision is not made:

   ▶ Do not spray if most of the greenbugs are mummies.
   ▶ Recheck the field in 2-4 days if no or very few mummies are present.
